

CIVIL ENGINEERING

WE PLAN, DESIGN & MANAGE CIVIL ENGINEERING PROJECTS.

We understand how the civil design blends with the demands of both the structural design and the architectural form of each project we undertake. This early appreciation of the future requirements of a project means that the design phase will be honed directly on solving issues critical to the efficient completion of any project.

DMC undertake civil engineering design associated with land development, road carriageways, bridges, walkways, tracks, public viewing platforms, retaining walls, wastewater and stormwater management, and geotechnical engineering.
