

COMMERCIAL SERVICES

THE FUSION OF ENGINEERING AND ARCHITECTURE.

Our unique professional capacity to blend the structural feasibility aspect of engineering with the artistic visual appeal of architecture into one functional space means that you will have a team that know how to conceptualise to any brief.

We have worked on a variety of commercial buildings that cover a range of different requirements. These include: shopping complexes and standalone stores, hospitality businesses, professional offices, showrooms, medical clinics, church buildings and more.

Each project starts with consideration of options for materials and finishes to create a result that enhances longevity, sustainability, energy efficiency and cost effective solutions.
